

SPECIALISED RACKING SYSTEMS

SPECIALISED RACKING lets you get the best from your warehouse performance. Let us help you create the exact racking system you need.

Double Deep Racking

Pallets are stored 2-deep and accessed using material handling equipment with pantograph or telescopic forks. Designed for excellent storage capacity, this system uses floor space efficiently by reducing the number of access aisles needed, and means forklifts have less distance to travel.

Carpet Racking

Carpet racking is specifically designed to safely store full rolls of carpet, vinyl and other long products. Our carpet racks are double-deep selective pallet racks with MDF that extends front to back, supported by interior beams. These solid, smooth shelves allow you to load and unload easily without the product catching.

Cantilever Racking

Versatile cantilever racking is an excellent solution for long or heavy loads such as pipes or timber, and items of varying length. Cantilever racking is a highly flexible option as it can be up to 10m high with multiple height adjustable arms. The towers can be either single or double-sided. A galvanneal option is ideal for outdoor storage.

Drive In Racking

This style of racking is perfect for high-density storage in warehouses with a low number of product lines. It allows maximum use of space as it minimises aisles between the racking. Ideal for installation in chilled and frozen applications.

Carton Live Storage

Cartons are placed on sloping roller tracks, supported on pallet racking. Cartons are loaded from the top end, they roll forward with gravity and are retrieved from the bottom. This can be an excellent addition to your existing pallet racking installation.

Pallet Live Racking

A high-density dynamic storage system that increases efficiency by maintaining a First-In/First-Out product flow. To achieve this, products are stocked from one aisle and picked from the adjoining aisle through the use of a gravity-fed rolling system. Ideal for expiration date-sensitive inventory, high-volume consumer goods.

Cable Racking

It's easy to store and dispense materials on our strong, versatile cable reel racks or wire spool dispensers. Ideal for contractors, electrical wholesalers, manufacturers, distributors, retailers and more. H-Frame Cable Reel Racks are ideal for larger, heavier cable reels and integrate into standard pallet racking.

Tyre Racking

The true advantage to our industrial tyre racking system is that it allows you access to every tyre from the aisle. Every tyre can be accessed without moving other product for a safe and time-efficient storage solution.

Hanging Garment Racking

To ensure your customers receive their garments in the best possible condition, they need to be stored correctly prior to delivery. Garment Racking provides both a cost-effective option and the best garment storage solution.

WHY PRS? We're a proudly NZ owned and operated company. We build better businesses by solving storage problems nationwide. If you're looking for experienced storage advice, quality products, service and installation – our team's here to help.
